

Safety Eats provides mobile customers food and beverage delivery through our cloud based application a PII secure order and encrypted security code for receiving the delivery. Safety Eats orders are delivered in our essential patented bluetooth lock and delivery bag system providing the safest contamination-free delivery from restaurant to customer.

Restaurants, Grocery Stores and Convenient Stores receive orders through the exclusive Safety Eats Restaurant app where they receive confirmed payment and order details. Orders are prepared and packed for Safety Eats Driver pick up only.

**SAFETY
EATS
DRIVER**

The Safety Eats Driver arrives at the Restaurant, Grocery or Convenient Store with the Safety Eats Smart Lock and the appropriate Safety Eats bag and/or bags that are exclusively registered to the Safety Eats Driver.

Restaurants, Grocery Stores and Convenient Stores will ask for the Smart Lock and Safety Eats bag. Then and only then will the provided scanning mechanism generate a unique encrypted single-use source code that will be sent exclusively to the customer.

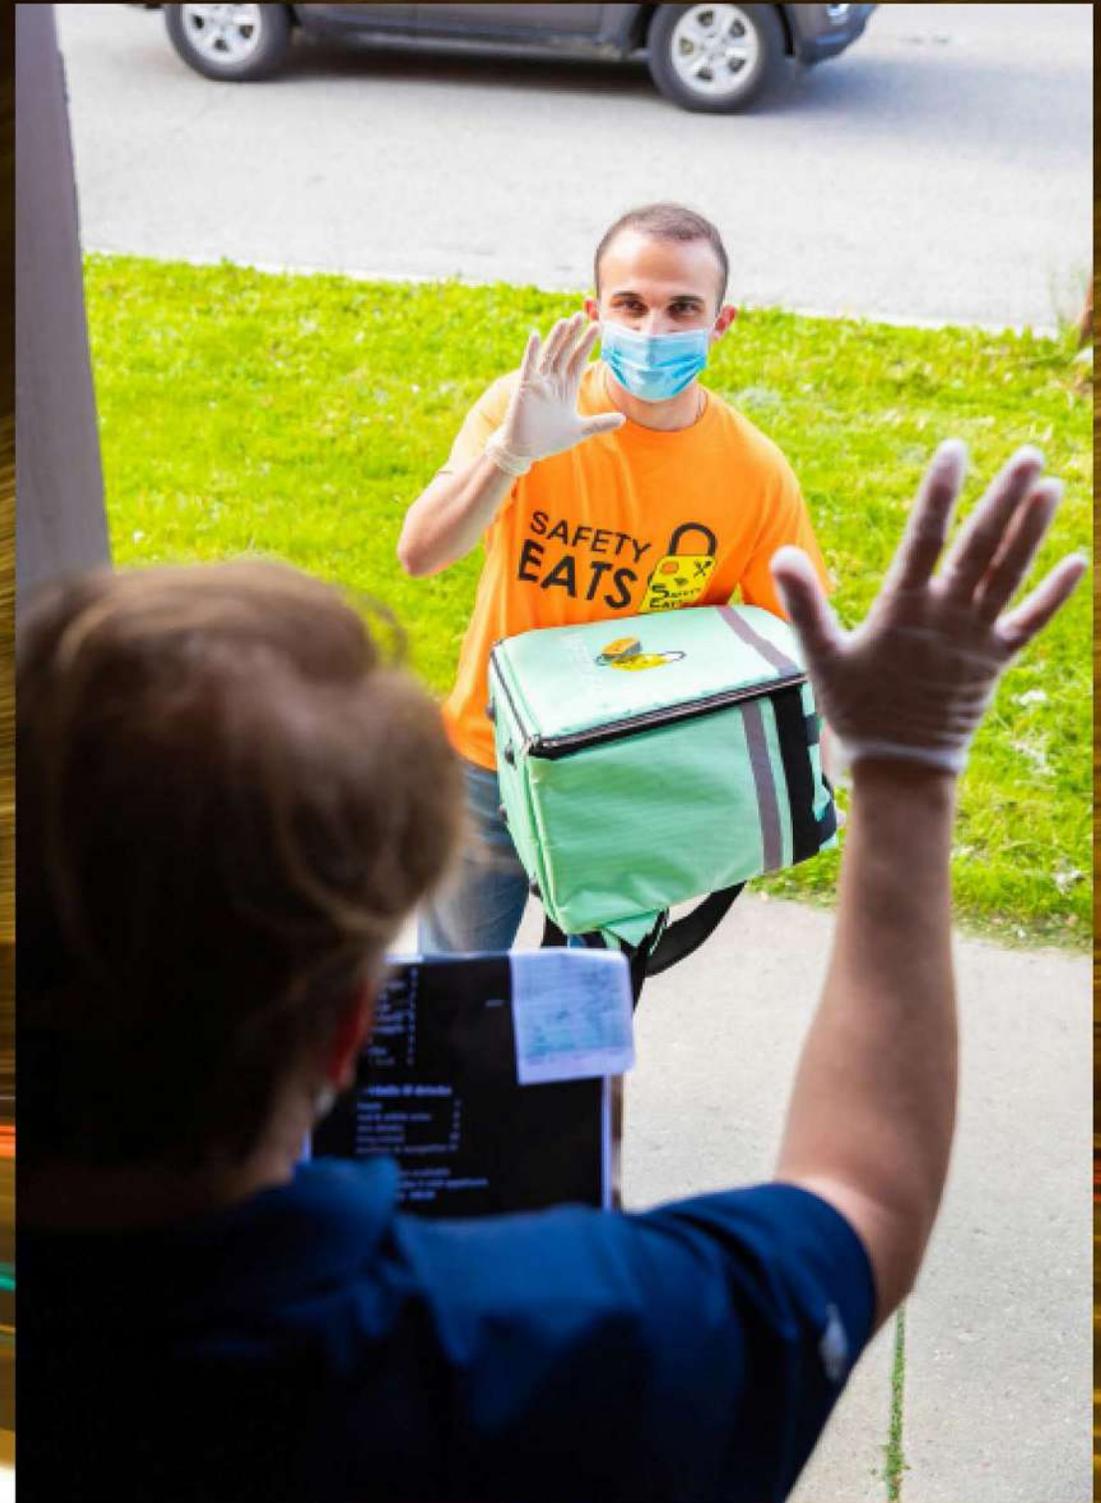

The restaurant and/or food preparation facility will place the order in the Safety Eats bag and/or bags, appropriate for the size and type of order, then lock the bag with the Safety Eats Smart Lock. The driver will then take the locked bag (which they have no access to) and deliver to the customer.

Once the driver arrives, the customer is the only individual who can open the Safety Eats Smart Lock with the one-time random source code provided by the restaurant. The customer will use his/her smartphone or computer to open the lock. The bag and/or bags will be unlocked allowing the customer to remove his/her food and/or beverages personally.

The Safety Eats Smart Lock, the bag and/or bags will then be given back to the driver.

A Safety Eats representative, from one of eight regional offices across the country are working around the clock to remotely ensure that the entire chain of custody is carefully monitored and all personally identifiable information is encrypted and secure.
